

Create Rugged, Secure Networks Anywhere

Your business is dynamic and your operations are mission-critical. Your teams in the field must be able to securely communicate and get the job done, no matter where they are or what they're trying to accomplish.

Decisive Technologies makes it easy to extend secure IT infrastructures beyond the office walls to enable small, powerful, and fully ruggedized IT networks almost anywhere.

With our rugged IT infrastructure solutions, your teams get convenient and reliable access to voice, text, and video communications solutions that are built to support their assignment and your mandate.

Strengthen Field Operations

Our rugged IT infrastructure solutions are engineered for the toughest challenges. As a result, they are ideal for deployments and applications where the most crucial work takes place off-site:

- Defense
- Homeland security
- Border security
- Law enforcement and tactical surveillance
- Public safety
- Industrial data collection, sensor control, and information management

Rely on Clear and Secure Communications

Clear and secure communications are critical when your team is on the move and miles — or worlds — away.

Decisive Technologies provides everything needed, from handheld devices to field-deployable networking systems. All of our ruggedized equipment is designed to meet size, weight, and power (SWaP) requirements, so teams in the field can keep moving while collecting and communicating a variety of information.

Our solutions also include Radio over IP (RoIP) and Radio over LTE (RoLTE) hardware, so your teams can communicate from anywhere. Network routing and multiplexed voice and data ensure that every communication is secure.

Create Small, Powerful Field Networks

In field applications, it's critical that network equipment be as small as possible without compromising power.

Our half-rack network solutions are 75 percent smaller than standard models, but have the power needed to establish field networks in any situation. And our portable backpack modules are ideal for teams on the move. These mobile units take advantage of the latest virtualization technologies to provide secure desktop infrastructure capabilities anywhere.

Take State-Of-The-Art Technology to the Field

Decisive Technologies' rugged IT infrastructure solutions are based on technically advanced and highly reliable hardware and software.

Hardware

- 16-core Intel Xeon-based servers
- Cisco routers and switches
- Uninterrupted power supply (UPS)

Software

- VMware Hyper-Converged Software (HCS)
- VMware Virtual SAN
- Data center virtualization

Stay Connected by Video

When you're in visual contact with your teams, you're in a far better position to support their activities in the field.

Our video solutions are ruggedized, yet light and portable. They are available in a variety of formats — including a miniature HD video option — and are designed to operate in the most challenging environments.

Choose the video solution best suited to your situation:

- Low-light
- Pinhole
- Mesh-canine
- Body-worn
- Thermal, ultra-rugged

To ensure you always have access to efficient and reliable video streaming, our video technologies compress video transmissions up to 95 percent for clear, real-time communications over LTE.

Count on Our Support

Your teams need support at all times and so do you. The right equipment for the job — and backup options — must be available at all times.

Our IT technicians support you every step of the way. They help you choose the right combination of hardware, software, and networking technologies to suit your needs and to support your teams on the ground.

Partner With the IT Infrastructure Experts

At Decisive Technologies, everything we do is designed to optimize business processes and improve business outcomes for medium and large enterprises. Our IT infrastructure specialists understand real-world business challenges and how to address those challenges with Enterprise IT solutions that are engineered from the ground up and from the inside out to improve your business.

All of our Enterprise IT Infrastructure solutions are designed to help you reduce:

- Capital expenditures (CAPEX) associated with developing and building a custom IT infrastructure
- Technical training costs for IT staff
- Support costs
- Ongoing maintenance costs
